Finalist for the National Book Award for Nonfiction * New York Times Bestseller * Starred Booklist and Library Journal Editors' Spring Pick * A Huffington Post Notable Nonfiction Book of the Year * One of the Best Books of the Month on Goodreads * Library Journal Best Sci-Tech Book of the Year * An American Library Association Notable Book of the Year "Sy Montgomery's *The Soul of an Octopus* does for the creature what Helen Macdonald's *H Is for Hawk* did for raptors." —New Statesman, UK "One of the best science books of the year." —Science Friday, NPR Another New York Times bestseller from the author of *The Good Good Pig*, this "fascinating...touching...informative...entertaining" (The Daily Beast) book explores the emotional and physical world of the octopus—a surprisingly complex, intelligent, and spirited creature—and the remarkable connections it makes with humans. In pursuit of the wild, solitary, predatory octopus, popular naturalist Sy Montgomery has practiced true immersion journalism. From New England aquarium tanks to the reefs of French Polynesia and the Gulf of Mexico, she has befriended octopuses with strikingly different personalities—gentle Athena, assertive Octavia, curious Kali, and joyful Karma. Each creature shows her cleverness in myriad ways: escaping enclosures like an orangutan; jetting water to bounce balls; and endlessly tricking companions with multiple "sleights of hand" to get food. Scientists have only recently accepted the intelligence of dogs, birds, and chimpanzees but now are watching octopuses solve problems and are trying to decipher the meaning of the animal's color-changing techniques. With her "joyful passion for these intelligent and fascinating creatures" (Library Journal Editors' Spring Pick), Montgomery chronicles the growing appreciation of this mollusk as she tells a unique love story. By turns funny, entertaining, touching, and profound, *The Soul of an Octopus* reveals what octopuses can teach us about the meeting of two very different minds. The primary conspiracy of the late 20th century. Lucy and Jem live on the Tasman Peninsula near Eaglehawk Neck, where Lucy is recovering from major surgery. As she tries to navigate her new body through the world, she develops a deep fascination with the local octopuses, and in doing so finds herself drawn towards the friendship of an old woman and her son. As the story unfolds, the octopuses come to shape Lucy's body and her sense of self in ways even she can't quite understand. *The Octopus and I* is a stunning debut novel that explores the wild, beating heart at the intersection of human and animal, love and loss, fear and hope. For readers of *Educated* and *The Glass Castle*, a harrowing, redemptive and profoundly inspiring memoir of childhood trauma and its long reach into adulthood, named one of the Best True Crime Books by Marie Claire. One Omaha winter day in November 1978, when Debora Harding was just fourteen, she was abducted at knifepoint from a church parking lot. She was thrown into a van, assaulted, held for ransom, and then left to die as an ice storm descended over the city. Debora survived. She identified her attacker to the police and then returned to her teenage life in a dysfunctional home where she was expected to simply move on. Denial became the family coping strategy offered by her fun-loving, conflicted father and her cruelly resentful mother. It wasn't until decades later - when beset by the symptoms of PTSD- that Debora undertook a radical project: she met her childhood attacker face-to-face in prison and began to reconsider and reimagine his complex story. This was a quest for the truth that would threaten the lie at the heart of her family and with it the sacred bond that once saved her. Dexterously shifting between the past and present, Debora Harding untangles the incident of her kidnapping and escape from unexpected angles, offering a vivid, intimate portrait of one family's disintegration in the 1970s Midwest. Written with dark humor and the pacing of a thriller, *Dancing with the Octopus* is a literary tour de force and a groundbreaking narrative of reckoning, recovery, and the inexhaustible strength it takes to survive. Combining the emotional depth of *The Art of Racing in the Rain* with the magical spirit of *The Life of Pi*, *Lily and the Octopus* is an epic adventure of the heart. When you sit down with *Lily and the Octopus*, you will be taken on an unforgettable ride. The magic of this novel is in the read, and we don't want to spoil it by giving away too many details. We can tell you that this is a story about that special someone: the one you trust, the one you can't live without. For Ted Flask, that someone special is his aging companion Lily, who happens to be a dog. *Lily and the Octopus* reminds us how it feels to love fiercely, how difficult it can be to let go, and how the fight for those we love is the greatest fight of all. Remember the last book you told someone they had to read? *Lily and the Octopus* is the next one. Teddy is unhappily single in L.A. In between sessions with his therapist and dates with men he meets online, Teddy has debates with his dachshund, Lily, who occupies his heart. Unfortunately, he is also able to communicate with the "octopus" attached to Lily's head, which is soon revealed to be a metaphor for Lily's lethal cranial tumor. As Lily's condition worsens, Teddy faces off with the "octopus," engaging it in a battle of wills that takes on epic proportions. An exceedingly authentic, keenly insightful, funny and ardent tribute to the purity of love between a pet and its human. -- This collection of bold and scathingly beautiful feminist poems imagines what comes after our current age of environmental destruction, racism, sexism, and divisive politics. Informed by Brenda Shaughnessy's craft as a poet and her worst fears as a mother, the poems in *The Octopus Museum* blaze forth from her pen: in these pages, we see that what was once a generalized fear for our children (car accidents, falling from a tree) is now hyper-reasonable, specific, and multiple: school shootings, nuclear attack, loss of health care, a polluted planet. As Shaughnessy conjures our potential future, she movingly (and often with humor) envisions an age where cephalopods might rule over humankind, a fate she suggests we may just deserve after destroying their oceans. These heartbreaking, terrified poems are the battle cry of a woman who is fighting for the survival of the world she loves, and a stirring exhibition of who we are as a civilization. Even the most totally awesome

story starts with a little bit of nothing. What happens next is up to you! A delightfully meta picture book that will set imaginations soaring. Features an audio read-along! It begins with an octopus who plays the ukulele. Since this is a story, the octopus has to want something—maybe to travel to faraway galaxies in a totally awesome purple spaceship. Then the octopus sets out to build a spaceship out of soda cans, glue, umbrellas, glitter, and waffles. OK, maybe the octopus needs some help, like from an adorable bunny friend, and maybe that bunny turns out to be . . . a rocket scientist? (Probably not.) But could something even more amazing come to pass? Debut author Maggie Tokuda-Hall, with the help of illustrator Benji Davies, sets up an endearingly funny story, then hands the baton to readers, who will be more than primed to take it away. When chance, or fate, throws two twelve-year-olds together on board a scientific research ship at the edge of the Great Pacific Garbage Patch, it's not all smooth sailing! Jeremy "JB" Barnes is looking forward to spending the summer before seventh grade hanging on the beach. But his mother, a scientist, has called for him to join her aboard a research ship where, instead, he'll spend his summer seasick and bored as he stares out at the endless plastic, microbeads, and other floating debris, both visible and not, that make up the Great Pacific Garbage Patch. Miles and miles away, twelve-year-old Sidney Miller is trying to come up with an alternate activity worthy of convincing her overprotective parents that she can skip summer camp. When Jeremy is asked to find the contact information for a list of important international scientists and invite them to attend a last-minute Emergency Global Summit, he's excited to have a chance to actually do something that matters to the mission. How could he know that the Sidney Miller he messages is not the famous marine biologist he has been tasked with contacting, but rather a girl making podcasts from her bedroom—let alone that she would want to sneak aboard the ship? Consider the Octopus is a comedy of errors, mistaken identity, and synchronicity. Above all, it is a heartfelt story about friendship and an empowering call to environmental protection, especially to our young people who are already stepping up to help save our oceans and our Earth.

Now in paperback, this collection of bold and scathingly beautiful feminist poems imagines what comes after our current age of environmental destruction, racism, sexism, and divisive politics. Just after passing Caraher's saloon, on the County Road that ran south from Bonneville, and that divided the Broderson ranch from that of Los Muertos, Presley was suddenly aware of the faint and prolonged blowing of a steam whistle that he knew must come from the railroad shops near the depot at Bonneville. In starting out from the ranch house that morning, he had forgotten his watch, and was now perplexed to know whether the whistle was blowing for twelve or for one o'clock. He hoped the former. Early that morning he had decided to make a long excursion through the neighbouring country, partly on foot and partly on his bicycle, and now noon was come already, and as yet he had hardly started. As he was leaving the house after breakfast, Mrs. Derrick had asked him to go for the mail at Bonneville, and he had not been able to refuse. "The sensitive descriptions throughout the book of what it is like to have autism are accurate and perceptive on so many levels" (Professor Tony Attwood, author of Asperger's Syndrome: A Guide for Parents and Professionals). A philosopher dons a wet suit and journeys into the depths of consciousness in Other Minds Although mammals and birds are widely regarded as the smartest creatures on earth, it has lately become clear that a very distant branch of the tree of life has also sprouted higher intelligence: the cephalopods, consisting of the squid, the cuttlefish, and above all the octopus. In captivity, octopuses have been known to identify individual human keepers, raid neighboring tanks for food, turn off lightbulbs by spouting jets of water, plug drains, and make daring escapes. How is it that a creature with such gifts evolved through an evolutionary lineage so radically distant from our own? What does it mean that evolution built minds not once but at least twice? The octopus is the closest we will come to meeting an intelligent alien. What can we learn from the encounter? In Other Minds, Peter Godfrey-Smith, a distinguished philosopher of science and a skilled scuba diver, tells a bold new story of how subjective experience crept into being—how nature became aware of itself. As Godfrey-Smith stresses, it is a story that largely occurs in the ocean, where animals first appeared. Tracking the mind's fitful development, Godfrey-Smith shows how unruly clumps of seaborne cells began living together and became capable of sensing, acting, and signaling. As these primitive organisms became more entangled with others, they grew more complicated. The first nervous systems evolved, probably in ancient relatives of jellyfish; later on, the cephalopods, which began as inconspicuous mollusks, abandoned their shells and rose above the ocean floor, searching for prey and acquiring the greater intelligence needed to do so. Taking an independent route, mammals and birds later began their own evolutionary journeys. But what kind of intelligence do cephalopods possess? Drawing on the latest scientific research and his own scuba-diving adventures, Godfrey-Smith probes the many mysteries that surround the lineage. How did the octopus, a solitary creature with little social life, become so smart? What is it like to have eight tentacles that are so packed with neurons that they virtually "think for themselves"? What happens when some octopuses abandon their hermit-like ways and congregate, as they do in a unique location off the coast of Australia? By tracing the question of inner life back to its roots and comparing human beings with our most remarkable animal relatives, Godfrey-Smith casts crucial new light on the octopus mind—and on our own. The Octopus of Global Control is a controversial, nonfiction book detailing how those in positions of power are able to manipulate society for their benefit, why they believe that they are entitled to impose their warped world view of reality on mankind, and how we can break free from their grip. The eight tentacles of control that are wrapped around humanity are the Military, Governmental, Covert, Physical, Financial, Media, Spiritual, and Scientific. The book tackles topics such as uncovering the Deep State, false flag terror events, the media's role in manufacturing wars, the 9/11 deception, the fraud of central banking, our broken education system, the use of religion to shape society, and the corrupted medical industry. The Octopus of Global Control footnotes these important events by featuring quotes and first-hand observations from over 500 witnesses and participants that were involved in the most important events in our history. Their words add context and help to paint the picture of these historic events by explaining who these people were, what they said, why it matters, and what actually happened. The author, Charlie Robinson, accomplishes the seemingly impossible task of blending the seriousness of these topics, and the respect they deserve, with dark humor, sarcasm and wit, that allow the reader to laugh at the preposterous while grasping the importance of these lessons. Praise for *Octopus: The Ocean's Intelligent Invertebrate* "The octopus—strange, mysterious, perfectly camouflaged, able to change texture, color, and shape, bendable, sneaky, and intelligent. Despite the billions of dollars we've poured into foreign wars, homeland security, and disaster response, we are fundamentally no better prepared for the next terrorist attack or unprecedented flood than we were in 2001. Our response to catastrophe remains unchanged: add another step to airport security, another meter to the levee wall. This approach has proved totally ineffective: reacting to past threats and trying to predict future risks will only waste resources in our increasingly unpredictable world. In *Learning from the Octopus*, ecologist and security expert Rafe Sagarin rethinks the seemingly intractable problem of security by drawing inspiration from a surprising source: nature. Biological organisms have been living -- and thriving -- on a risk-filled planet for billions of years. Remarkably, they have done it without planning, predicting, or trying to perfect their responses to complex threats. Rather, they simply adapt to solve the challenges they continually face. Military leaders, public health officials, and business professionals would all like to be more adaptable, but few have figured out how. Sagarin argues that we can learn from observing how nature is organized, how organisms learn, how they create partnerships, and how life continually diversifies on this unpredictable planet. As soon as we dip our toes into a cold Pacific tidepool and watch what we thought was a rock turn into an octopus, jetting away in a cloud of ink, we can begin to see the how human adaptability can mimic natural adaptation. The same mechanisms that enabled the octopus's escape also allow our immune system to ward off new infectious diseases, helped soldiers in Iraq to recognize the threat of IEDs, and aided Google in developing faster ways to detect flu outbreaks. While we will never be able to predict the next earthquake, terrorist attack, or market fluctuation, nature can guide us in developing security systems that are not purely reactive but proactive, holistic, and adaptable. From the tidepools of Monterey to the mountains of Kazakhstan, Sagarin takes us on an eye-opening tour of the security challenges we face, and shows us how we might learn to respond more effectively to the unknown threats lurking in our future.
