This provocative collection of essays challenges traditional ideas of strategic s- tial planning and opens up new avenues of analysis and research. The diversity of contributions here suggests that we need to rethink spatial planning in several f- reaching ways. Let me suggest several avenues of such rethinking that can have both theoretical and practical consequences. First, we need to overcome simplistic bifurcations or dichotomies of assessing outcomes and processes separately from one another. To lapse into the nostalgia of imagining that outcome analysis can exhaust strategic planners' work might appeal to academics content to study 'what should be', but it will doom itself to further irrelevance, ignorance of politics, and rationalistic, technocratic fantasies. But to lapse into an optimism that 'good process' is all that strategic planning requires, similarly, rests upon a ction that no credible planning analyst believes: that enough talk will miraculously transcend con ict and produce agreement. Neither sing- minded approach can work, for both avoid dealing with con ict and power, and both too easily avoid dealing with the messiness and the practicalities of negotiating out con icting interests and values – and doing so in ethically and politically critical ways, far from resting content with mere 'compromise'. Second, we must rethink the sanctity of expertise. By considering analyses of planning outcomes as inseparable from planning processes, these accounts help us to see expertise and substantive analysis as being 'on tap', ready to put into use, rather than being particularly and technocratically 'on top'. The IOS Index of Names of Cactaceae gives a complete overview of name changes for cacti over the past 40 years, listing alphabetically valid and invalid names with a full bibliographic reference. The dramatic recent advances and emergent trends in technologies have brought to the fore many vital and challenging questions and dilemmas for leaders and organizations. These are issues that call for a critical, insightful examination of key questions such as: are modern technologies beneficial or problematic for the well-being of individuals, organizations, and societies at large; why do we seem to feel more disconnected in an age of technological connectivity; can organizations reduce technology-induced stresses and find ways to enable the mindful use of technologies and how can organizations, governments and societies manage the use of technologies wisely? Such questions, when explored from various perspectives of wisdom, can yield significant insights, increase awareness of the issues, deepen the dialogue and help redesign an increasingly technology-driven future. However, there is little researched published material available on such questions and issues. Practical Wisdom in the Age of Technology: Insights, Issues and Questions for a New Millennium will provide a space to engage in thought-provoking dialogue and critical reflection on a variety of themes linking technology and practical wisdom. It will offer a foundation for exploration, inquiry, engagement, and discussion among organizational, political and social leaders, technology professionals, information systems academicians, wisdom researchers, managers, philosophers of technology, and other practitioners. Encounters in Planning Thought builds on the intellectual legacy of spatial planning through essays by leading scholars from around the world, including John Friedmann, Peter Marcuse, Patsy Healey, Andreas Faludi, Judith Innes, Rachelle Alterman and many more. Each author provides a fascinating and inspiring unravelling of his or her own intellectual journey in the context of events, political and economic forces, and prevailing ideas and practices, as well as their own personal lives. This is crucial reading for those interested in spatial planning, including those studying the theory and history of spatial planning. Encounters in Planning Thought sets out a comprehensive, intellectual, institutional and practical agenda for the discipline of spatial planning as it heads towards its next half-century. Together, the essays form a solid base on which to understand the most salient elements to be taken forward by current and future generations of spatial planners. The Oxford Handbook of Positive Psychology is the seminal reference in the field of positive psychology, which continues to transcend the boundaries of academia to capture the imagination of the general public. Almost 20 years after the first publication of this groundbreaking reference, this new third edition showcases how positive psychology is thriving in diverse contexts and fields of psychology. Consisting of 68 chapters of the most current theory and research, this updated handbook provides an unparalleled cross-disciplinary look at positive psychology from diverse fields and all branches of psychology, including social, clinical, personality, counseling, health, school, and developmental psychology. Several new chapters are included which highlight the latest research on positive psychology and neuroscience, as well as growing areas for applications of positive psychology. This book examines if it is possible to teach wisdom. It considers how people at different times and places have engaged the age-old question of how (or whether) we can learn to live a good life, and what that life is like. Offering a range of perspectives, coverage considers Greek and Confucian philosophy; Christian, Islamic and Buddhist religion; African tradition, as well as contemporary scientific approaches to the study of wisdom. At a time when strategic spatial planning is undergoing a renaissance in Europe, The Visual Language of Spatial Planning makes a unique contribution to this rapidly growing area of teaching and research. Discussing the relevant theoretical perspectives on policy-making and planning, combined with cartographic communication and the use of cartographic representations in the planning process, Stephanie Duhr provides conceptual and practical tools to help students and practitioners better understand maps and visualizations in strategic spatial planning. The book is the first to review the form, style and use of cartographic representations in strategic spacial plans in the Netherlands, Germany and England as well as at European level. Significant differences between planning traditions and the impact of these on transnational planning processes are highlighted. It concludes by discussing the practical implications for future strategic spacial planning processes in Europe and the best use of cartographic representations to reach agreement and to focus dialogue. Many challenges were identified in CSCW some thirty years ago, and some of these remain problematic today. However they are being progressively transformed and this edited volume contains contributions that demonstrate how these new challenges are being dealt with in a variety of ways, reflecting the balance of rigour and creativity that has always characterised the field. Originally presented at COOP '08 which took place in Carry-le-Rouet, France in 2008, the contributions to this volume have been substantially extended and revised. New technologies, new domains and new methods are described for supporting design and evaluation. Taking a progressive and critical stance, the authors cover a variety of themes including inter-organisational working, non task-based environments, creativity, and the development of Web 2.0 (and even Web 3.0) applications, including new cooperative mechanisms and new classification possibilities. The expansion of the European Union in 2004 has had significant consequences for both existing and new members of the Union. New member states are assimilating into a new institutional and policy framework, while the changing geography of Europe provides a different context for policy development in pre-2004 member states. One of the more important fields in which these changes are impacting is regional development. The admission of the new countries changes patterns of economic and social disparities across the territory of the European Union, which in turn demands that existing approaches to regional development are reconsidered. An approach which has proved to be one of the most innovative is spatial planning. This book brings together a team of academics and policy makers from across the new Europe involved in regional development and spatial planning. Providing insights into different approaches, it offers a valuable opportunity to compare experiences across European borders. There is a strong international dimension to spatial planning. European integration strengthens interconnections, development and decision-making across national and regional borders. EU policies in areas such as environment, transport, agriculture or regional policy have far-reaching effects on spatial development patterns and planning procedures. Planners in the EU are now routinely engaged in cooperation across national borders to share and devise effective ways of intervening in the way our cities, towns and rural areas develop. In short, the EU has become an important framework for planning practice, research and teaching. Spatial planning in Europe is being 'Europeanized', with corresponding changes for the role of planners. Written for students, academics, practitioners and researchers of spatial planning and related disciplines, this book is essential reading for everybody interested in engaging with the European dimension of spatial planning and territorial governance. It explores: spatial development trends and their influence on planning the nature, institutions and actors of the European Union from a planning perspective the history of spatial planning at the transnational scale the planning tools, perspectives, visions and programmes supporting European cooperation on spatial planning the territorial impacts of the Community's sector policies the outcomes of European spatial planning in practice. This book presents perspectives from world experts in the field of wisdom studies to propose how wisdom can provide the foundation upon which solutions to social and global problems can be grounded. The authors argue that where society has come to rely on leaders with skills relating to knowledge and intelligence; instead we should focus on wisdom-based acumen for our leaders in government, business, and the military. In this book the authors offer evidence-based definitions of wisdom and apply these to world problems they believe could potentially be solved using wise solutions. Among the case studies confronted are terrorism and war, poverty and economic disparity, climate change, increasing antibiotic resistance and political corruption. Focusing on the cognitive, social and emotional processes involved in everyday decision-making, this book presents a compelling argument for the application of wise problem-solving to complex world issues that will appeal in particular to those in leadership, teaching and policy roles, and open new pathways in the fields of wisdom-studies, psychology, sociology and political theory. Furthermore this unifying process goes at least as far back as the Roman empire, is accelerating, and affects every one of Europe's 150 or so languages including those of different families such as Basque and Finnish. The changes are by no means restricted to lexical borrowing but involve every grammatical aspect of the language. They are usually so minute that neither native speakers nor trained linguists notice them. But they accumulate and give rise to new grammatical structures that lead in turn to new patterns of areal relationship. Professor Heine and Professor Kuteva look for the causes of linguistic change in cultural and economic exchanges across national and regional boundaries and in the processes that occur when speakers learn or are in close contact with another language. Testing their data and conclusions against findings from elsewhere in the world, the authors reconstruct and reveal when, how, and why common grammatical structures have evolved and continue to evolve in processes of change that will, they argue, transform the linguistic landscape of Europe. The book is written in clear, non-technical language. It will appeal to scholars and students of language change and variation in Europe and elsewhere. It will also interest everyone concerned to understand the nature of language and language change. "Containing cases decided by the Supreme Court of Pennsylvania." (varies) A topic ignored in mainstream scientific inquiry for decades, wisdom is beginning to return to the place of reverence that it held in ancient schools of intellectual study. A Handbook of Wisdom, first published in 2005, explores wisdom's promise for helping scholars and lay people to understand the apex of human thought and behavior. At a time when poor choices are being made by notably intelligent and powerful individuals, this book presents analysis and review on a form of reasoning and decision-making that is not only productive and prudent, but also serves a beneficial purpose for society. A Handbook of Wisdom is a collection of chapters from some of the most prominent scholars in the field of wisdom research. Written from multiple perspectives, including psychology, philosophy, and religion, this book gives the reader an in-depth understanding of wisdom's past, present, and possible future direction within literature, science, and society. Since its foundation the European Union has gradually developed policies that are aimed at achieving increased economic and social cohesion. This book examines the most recent of these, the concept of territorial cohesion. Territorial cohesion is the pursuit of balanced development, competitiveness, sustainable development, and good governance. These concerns are most readily addressed by the formulation of spatial strategies under the umbrella of spatial planning, that brings together a multitude of public and private actors in a process that requires cohesion, coherence and co-operation. This book traces the development of spatial planning at European level and argues that spatial planning can become a vehicle, not only for territorial cohesion, but for EU policy generally.
